

Textarea in HTML

In HTML, the `<textarea>` element is used to create a multi-line text input area where users can enter text.

```
<label for="message">Enter your message:</label>  
<textarea id="message" name="message" rows="4"  
          cols="40"></textarea>
```

Ifram in HTML

In HTML, the `<iframe>` element is used to embed another HTML document or webpage within the current HTML document. This allows you to display content from another website or to create a "window" within your website for displaying content such as videos, maps, or social media feeds.

```
<iframe  
src="https://www.youtube.com/embed/dQw4w9WgXcQ"  
width="560" height="315" frameborder="0"  
allowfullscreen></iframe>
```

Select in HTML

In HTML, the `<select>` element is used to create a drop-down list of options for users to choose from.

```
<label for="cars">Choose a car:</label>
  <select id="cars" name="cars">
    <option value="volvo"> Volvo </option>
    <option value="saab"> Saab </option>
    <option value="mercedes"> Mercedes </option>
    <option value="audi"> Audi </option>
  </select>
```

Video tag in HTML

In HTML, the `<video>` element is used to embed a video into a web page. The `<video>` element provides a standardized way to include videos on web pages, with built-in playback controls and the ability to specify alternate video sources for different browsers or devices.

```
<video src="example.mp4"> My video </video >
```

Attributes - controls - height - width - loop - autoplay
