

Class in HTML

In HTML, both class and id attributes are used to add specific styles or functionality to an element.

The class attribute is used to define a class or group of elements with similar styles or behavior. Multiple elements can have the same class, and a single element can have multiple classes

Id in HTML

The id attribute, on the other hand, is used to uniquely identify a single element. Each id value must be unique within the entire HTML document.

Caption tag

In HTML, the <caption> element is used to provide a caption or a title for a table. The <caption> element should be placed immediately after the opening <table> tag, and its content will be displayed centered above the table.

```
<table>
<caption>Monthly Expenses</caption>
<tr>
<th>Category</th>
<th>Amount</th>
</tr>
<tr>
<td>Rent</td>
<td>$1,000</td>
</tr>
<tr>
<td>Utilities</td>
<td>$200</td>
</tr>
<tr>
<td>Groceries</td>
<td>$400</td>
</tr>
</table>
```

Thhead in table

The thead element is used to group together the header content of a table. This typically includes the column headings or titles for the table. The thead element should be used once per table, and it should come before the tbody

Tbody in table

The tbody element is used to group together the body content of a table. This typically includes the data rows that make up the bulk of the table. The tbody element can be used multiple times within a table, but it should always come after the thead element

Colspan attribute in HTML

The colspan attribute is an HTML attribute that can be used to specify the number of columns a cell should span or occupy in a table. It is used within the <td> or <th> tags to define the number of columns that a cell should merge

```
<table>
  <tr>
    <td colspan="2">This cell spans two columns</td>
  </tr>
  <tr>
    <td>Cell 1</td>
    <td>Cell 2</td>
  </tr>
</table>
```

Block-level Element

<fieldset>	<dl>	<form>	< h 1>-< h 6 >	<table>	< noscript>
<nav>	<canvas>	<footer>	< h r >	<tfoot>	
< article >	<dd>	<figure>			<p>
< a side >	<list>	<figcaption>	<main>	<video>	<pre>
<blockquote>	< dt >	<address>	<header>	<figcaption>	<section>

Inline-level Element

<a>	<i>	<input>	<textarea>	<q>	<select>
<abbr>	<big>	<label>	<time>	<output>	<var>
	<button>	<map>	<sub>		<cite>
	<code>	<map>	<sup>	<samp>	<bdo>
	<dfn>	<object>	<small>	<script>	<ac ron y m>
