

# Div tag in html

In HTML, the <div> tag is used to create a division or section in a web page. It is a container element that allows you to group related elements together and apply styles

```
<!DOCTYPE html>
<html>
  <head>
    <title>My Web Page</title>
  </head>
  <body>
    <div>
      <h1>Welcome to my website!</h1>
      <p>Here is some text about me and my interests.</p>
      <ul>
        <li>Interest 1</li>
        <li>Interest 2</li>
        <li>Interest 3</li>
      </ul>
    </div>
  </body>
</html>
```

# Span tag in html

In HTML, the <span> tag is an inline-level element that is used to group inline-elements or text together and apply styles

```
<!DOCTYPE html>
<html>
  <head>
    <title>My Web Page</title>
    <style>
      .highlight {
        color: red;
        font-weight: bold;
      }
    </style>
  </head>
  <body>
    <p>Here is some text that <span class="highlight">needs to be highlighted</span>
  </body>
</html>
```

# hr tag in html

In HTML, the <hr> tag is used to create a horizontal rule or line to visually separate content on a web page. It is a self-closing tag, meaning that it does not require a closing tag.

```
<p>This is some text.</p>
```

```
<hr>
```

```
<p>This is some more text.</p>
```

# Big and Small tag in html

In HTML, the <table> tag is used to create a table on a web page. Tables are used to display data in rows The <big> tag increases the size of the enclosed text, while the <small> tag decreases the size of the enclosed text. These tags are typically used to emphasize or de-emphasize text within a paragraph or heading. columns, such as lists of products, schedules, or pricing information.

```
<p>This is some <big>big text</big> and this is some <small>small text</small>.</p>
```
